Subject index

Adsorption–nucleation/growth model
Adsorption–nucleation/growth based model for electrochemical phase formation and Avrami ansatz for a multicomponent competitive growth process (Bhattacharjee, Rangarajan) 207
Amalgam formation
Double layer effects in the electrode kinetics of amalgam formation reactions. Part 1. A comparison of the EE and IA mechanisms (Fawcett) 13
Amperometry
Amperometric response of circular solid electrodes in thin-layer flow channels (Ou, Anderson) 1
Aniline
Electrochemical generation of excited TICT states. Part III. Aryl derivatives of *N*,*N*-dimethylaniline (Kapturkiewicz) 131
Anion adsorption
A simple model for the competitive adsorption of anions and hydrogen on the (100) orientation of a platinum surface in acid medium: the three-state lattice gas model (Armand, Rosinberg) 191
Avrami ansatz
Adsorption–nucleation/growth based model for electrochemical phase formation and Avrami ansatz for a multicomponent competitive growth process (Bhattacharjee, Rangarajan) 207

Bipyridine
Supramolecular electrochemistry. Redox series of cyano-bridged polynuclear bipyridine ruthenium(II) complexes (Roffia et al.) 157

Charge transport
Impedance investigation of the charge transport in film-modified electrodes (Gabrielli et al.) 59
Clay-modified electrodes
Oxometalate-clay-modified electrodes: example of metatungstate incorporated in stearyltrimethylammonium-montmorillonite layers (Keita et al.) 47
Cyano-bridged polynuclear bipyridine ruthenium(II) complexes
Supramolecular electrochemistry. Redox series of cyano-bridged polynuclear bipyridine ruthenium(II) complexes (Roffia et al.) 157

Deuterium
On the behaviour of Pd deposited in the presence of evolving deuterium (Spzak et al.) 255
N,*N*-Dimethylaniline
Electrochemical generation of excited TICT states. Part III. Aryl derivatives of *N*,*N*-dimethylaniline (Kapturkiewicz) 131

EE mechanism
Double layer effects in the electrode kinetics of amalgam formation reactions. Part 1. A comparison of the EE and IA mechanisms (Fawcett) 13
Ethyl acetate
Electrochemical polymerization of poly(thiophene-3-ethyl acetate) — a new candidate for a rechargeable battery cathode (Li, Albery) 279

FAD
Thin-layer spectroelectrochemical study of the reversible reaction between nicotinamide adenine dinucleotide and flavin adenine dinucleotide (Bergel, Comtat) 219
Film-modified electrodes
Impedance investigation of the charge transport in film-modified electrodes (Gabrielli et al.) 59

Flavin adenine dinucleotide
Thin-layer spectroelectrochemical study of the reversible reaction between nicotinamide adenine dinucleotide and flavin adenine dinucleotide (Bergel, Comtat) 219
Flow channels
Amperometric response of circular solid electrodes in thin-layer flow channels (Ou, Anderson) 1
Formaldehyde
Oscillating electrocatalytic systems. Part II. "In situ" UV–visible reflectance spectroscopic investigation of formaldehyde oxidation on rhodium in alkaline medium (Hachkar et al.) 173

Growth processes
Adsorption–nucleation/growth based model for electrochemical phase formation and Arrami ansatz for a multicomponent competitive growth process (Bhattacharjee, Rangarajan) 207
Graphite hydrogen sulphate
Graphite hydrogen sulphate as an electrode material for inorganic anodic oxidations (Jansen, Beck) 91

Hydrogen adsorption
A simple model for the competitive adsorption of anions and hydrogen on the (100) orientation of a platinum surface in acid medium: the three-state lattice gas model (Armand, Rosinberg) 191
Hydrogen sulphate ion
Graphite hydrogen sulphate as an electrode material for inorganic anodic oxidations (Jansen, Beck) 91

IA mechanism
Double layer effects in the electrode kinetics of amalgam formation reactions. Part 1. A comparison of the EE and IA mechanisms (Fawcett) 13

Keggin heteropolyanions
Voltammetric study of the transfer of Keggin-type heteropolyanions across the nitrobenzene/water interface (Osakai et al.) 145

Lithium
Rechargeable all solid-state lithium and sodium cells with composite cathodic films based on $Na_{1+x}V_3O_8$ (Wang, Pistoia) 253

Mercury
On the thermodynamic stability of condensed uracil films formed at the mercury/electrolyte interface in the presence of different supporting electrolytes (Wandlowski) 233
Montmorillonite layers
Oxometalate-clay modified electrodes: example of metatungstate incorporated in stearyltrimethylammonium-montmorillonite layers (Keita et al.) 47

NAD
Thin-layer spectroelectrochemical study of the reversible reaction between nicotinamide adenine dinucleotide and flavin adenine dinucleotide (Bergel, Comtat) 219
Nicotinamide adenine dinucleotide
Thin-layer spectroelectrochemical study of the reversible reaction between nicotinamide adenine dinucleotide and flavin adenine dinucleotide (Bergel, Comtat) 219
Nitrobenzene
Voltammetric study of the transfer of Keggin-type heteropolyanions across the nitrobenzene/water interface (Osakai et al.) 145

Oscillating electrocatalytic systems
Oscillating electrocatalytic systems. Part II. "In situ" UV–visible reflectance spectroscopic investigation of formaldehyde oxidation on rhodium in alkaline medium (Hachkar et al.) 173
Oxometalate-clay-modified electrodes
Oxometalate-clay-modified electrodes: example of metatungstate incorporated in stearyltrimethylammonium-montmorillonite layers (Keita et al.) 47

Palladium
On the behaviour of Pd deposited in the presence of evolving deuterium (Spzak et al.) 255
The role of the electrolyte anion in anodic dissolution of the Pd(100) surface (Solomun) 31
Permeation
Permeation through polymer coatings on electrodes. Membrane versus pinhole permeation (Savéant) 91

Platinum
A simple model for the competitive adsorption of anions and hydrogen on the (100) orientation of a platinum surface in acid medium: the three-state lattice gas model (Armand, Rosinberg) 191
An X-ray photoelectron spectroscopic study of the influence of electrode fabrication on carbon supported Pt + Ru electrodes (Buckley, Kennedy) 261
Polymer-coated electrodes
Permeation through polymer coatings on electrodes. Membrane versus pinhole permeation (Savéant) 91

Quinolinols
Self-protonation mechanism in the electroreduction of quinolinols (Roffia et al.) 115

Reaction kinetics
Combined electrolysis–stopped flow method (SFEL). The direct study of reaction kinetics with electrogenerated particles (Mairanovsky, Samvelyan) 285
Rechargeable cells
Electrochemical polymerization of poly-(thiophene-3-ethyl acetate) — a new candidate for a rechargeable battery cathode (Li, Albery) 279
Rechargeable all solid-state lithium and sodium cells with composite cathodic films based on $Na_{1+x}V_3O_8$ (Wang, Pistoia) 275
Rhodium
Oscillating electrocatalytic systems. Part II. "In situ" UV–visible reflectance spectroscopic investigation of formaldehyde oxidation on rhodium in alkaline medium (Hachkar et al.) 173
Ruthenium
An X-ray photoelectron spectroscopic study of the influence of electrode fabrication on carbon supported Pt + Ru electrodes (Buckley, Kennedy) 261
Supramolecular electrochemistry. Redox series of cyano-bridged polynuclear bipyridine ruthenium(II) complexes (Roffia et al.) 157

Self-protonation mechanism
Self-protonation mechanism in the electroreduction of quinolinols (Roffia et al.) 115

Silicon nitride
The zeta potential of silicon nitride thin films (Bousse, Mostarshed) 269
Sodium
Rechargeable all solid-state lithium and sodium cells with composite cathodic films based on $Na_{1+x}V_3O_8$ (Wang, Pistoia) 279
Stopped-flow electrolysis (SFEL)
Combined electrolysis–stopped flow method (SFEL). The direct study of reaction kinetics with electrogenerated particles (Mairanovsky, Samvelyan) 285

Thin films
The zeta potential of silicon nitride thin films (Bousse, Mostarshed) 269
Thin-layers
Amperometric response of circular solid electrodes in thin-layer flow channels (Ou, Anderson) 1
Thiophene
Electrochemical polymerization of poly-(thiophene-3-ethyl acetate) — a new candidate for a rechargeable battery cathode (Li, Albery) 257
TICT states
Electrochemical generation of excited TICT states. Part III. Aryl derivatives of *N,N*-dimethylaniline (Kapturkiewicz) 131
Tungsten
Oxometalate-clay-modified electrodes: example of metatungstate incorporated in stearyltrimethylammonium-montmorillonite layers (Keita et al.) 47
Twisted intramolecular charge transfer
Electrochemical generation of excited TICT states. Part III. Aryl derivatives of *N,N*-dimethylaniline (Kapturkiewicz) 131

Uracil films
On the thermodynamic stability of condensed uracil films formed at the mercury/electrolyte interface in the presence of different supporting electrolytes (Wandlowski) 233
UV–visible reflectance spectroscopy
Oscillating electrocatalytic systems. Part II. "In situ" UV–visible reflectance spectroscopic investigation of formaldehyde oxidation on rhodium in alkaline medium (Hachkar et al.) 173

Vanadium oxide
Rechargeable all solid-state lithium and sodium cells with composite cathodic films based on $Na_{1+x}V_3O_8$ (Wang, Pistoia) 275
Voltammetry
Voltammetric study of the transfer of Keggin-type heteropolyanions across the nitrobenzene/water interface (Osakai et al.) 145
X-ray photoelectron spectroscopy
An X-ray photoelectron spectroscopic study of the influence of electrode fabrication on carbon supported Pt + Ru electrodes (Buckley, Kennedy) 261
